(*1) The case that output low voltage on 15mA load. The output voltage could be higher voltage due to the generate voltage by the internal resistor when the power consumption is large with low voltage output. Please evaluate carefully with the actual system.

(*2) The maximum voltage can be applied to connecting IO port as output IO port when external circuits connecting to IO port. This is equivalent to VCCext on Reference 4.

(*3) When external IO port is connected, control the currency less than 15mA on IO port. Please do not apply more than 15 mA to connecting IO port as output IO port when external circuits connecting to IO port.

(*4) The typical current value when high voltage input into Input port.

10. Windows Software (optional)

2ndLook is an optional image acquisition software package offering a complete solution to the customers looking for a user-friendly way to connect and acquire images without any development experience necessary. The software enables real-time synchronized video and image recording from GenICam-compliant USB3 Vision, GigE Vision, and DirectShow cameras (Fig. 10.1).

2ndLook supports popular file formats, such as AVI, TIFF, PNG, JPEG and allows recording from multiple cameras to different file formats concurrently.

Multispectral imaging conversion filters for Spectral Devices Inc. cameras are built in in the software (Fig. 10.2). This allows users to view montages of spectral images in real-time (Fig. 10.3). The built-in debayering algorithm displays color images from the raw RGB multispectral images.

It is an easy to use interface with interactive help and user guides. Demo version provides all features, except save to disk function.
